Typical lumen output (±10%) at 5000K CCT and 277V (LV) under 25°C ambient temperature.

Fixtures are shipped from factory with the lowest CCT and wattage setting. Factory settings can be changed in the field via switches.

LUMEN MAINTENANCE

Projected L70 > 100,000 hours.

Lumen Maintenance, also known as L70, is a lifetime measurement criteria developed by IESNA (Illuminating Engineering Society of North America) to evaluate the useful lifetime of an LED fixture in terms of the expected number of operating hours until the light output has diminished to 70% of initial levels. An LED fixture is considered to have reached its rated life when it emits 30% less light than it initially did.
