EverSite Area Light

(#LTA)

Stop Blowing Your Maintenance Budget

When it comes to area lights, finding ultra-performance fixtures that are truly maintainable was just a dream … until now.

Area lights aren't expensive to buy, *they're expensive to access*. Every replacement, every driver swap, every failed photocell means a disruption in foot or vehicle traffic, a ground crew, and a bucket truck for thirty minutes of work forty feet in the air.

Flip. Swap. Done.

Introducing LifeTime EverSite area lights featuring the patented ReLuma® Module – the industry's first and only plug-and-play light engine designed for quick and easy replacement.

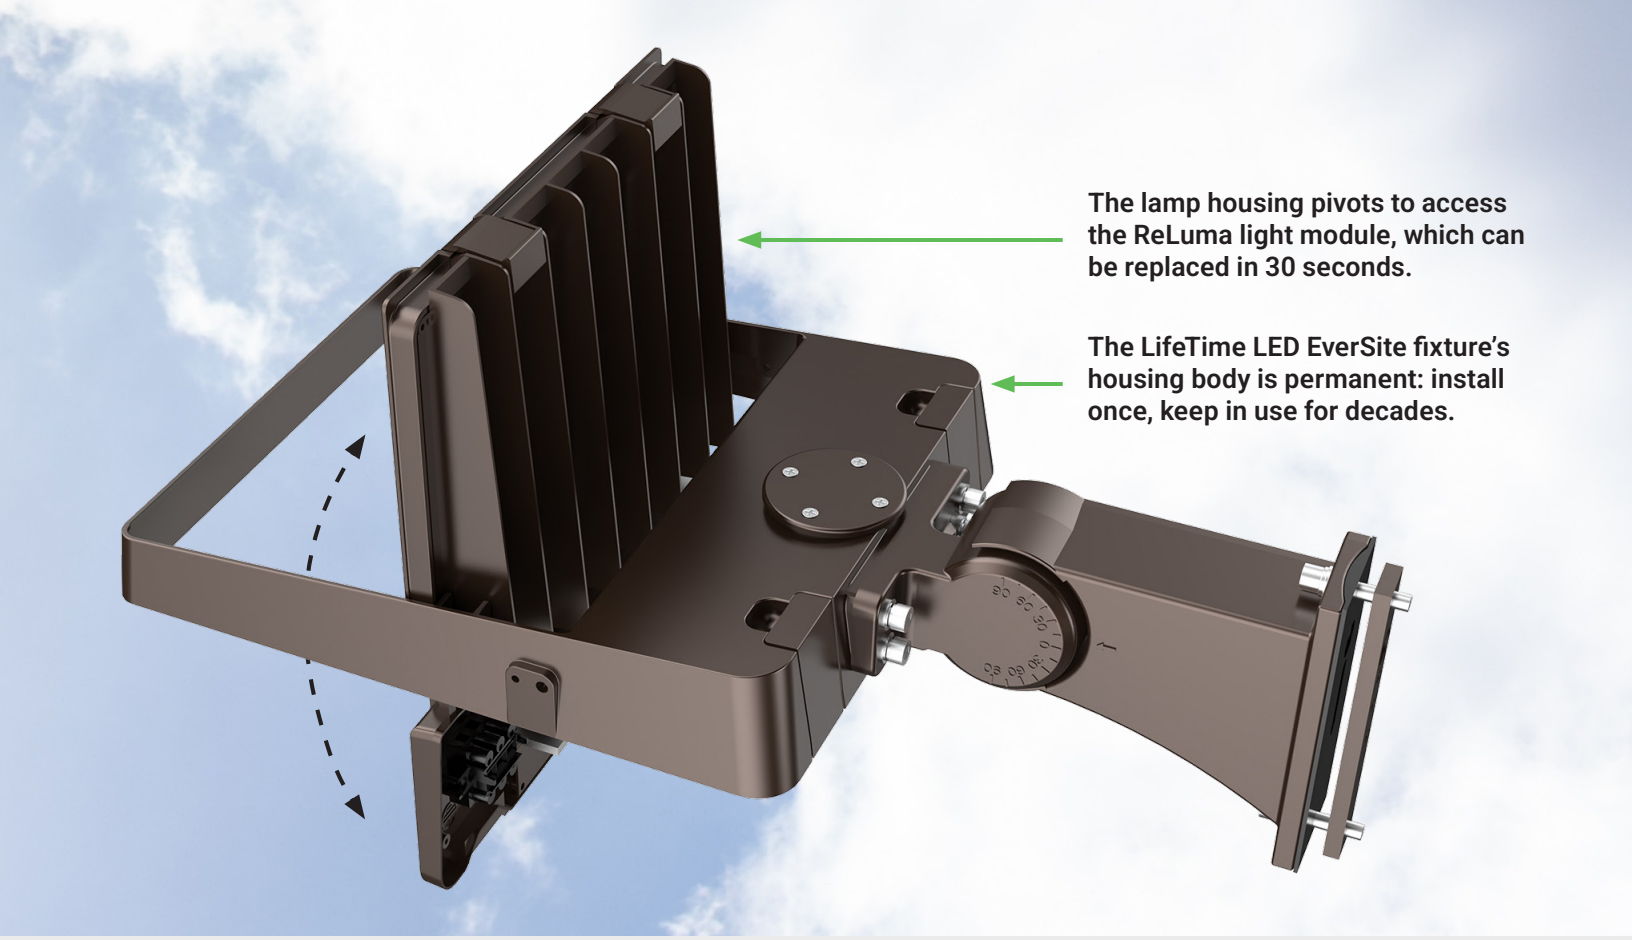

Simply replace the Module and keep the housing body for life. Save time, save labor, save money and save the planet from unnecessary fixture disposals.

70% LOWER TOTAL COST

The LifeTime LED EverSite is the first area light engineered to be renewed instead of replaced. The optical and electrical module drops out and back in at the pole in 30 seconds. That single design innovation significantly reduces repair downtime and total cost of ownership.

WHEN LIGHTING INNOVATION FORCES INDUSTRY CHANGE

Reusable

Don't Just Recycle, ReLuma®

The Linmore ReLuma Module is a patented light engine that enables lighting maintenance personnel to renew LifeTime EverWay Roadway streetlights in 30 seconds.

As a direct result, more fixtures can be repaired in less time, preventing service outages from backing up. You'll experience:

- **Lower Overall Costs**
- **Less Downtime**
- **Reduced Waste**

Responsible

Support a Circular Economy

ReLuma also minimizes landfill waste. Upon purchase, end users are registered with Linmore to activate their warranty. Then, at the end of a ReLuma Module's service life, it is returned to Linmore for re-manufacturing. Used components are responsibly recycled and replaced with the latest technology. Restored Modules are kept in stock and available for reuse.

Reliable

Lower Maintenace Costs

Municipalities, public utilities and commercial entities all face critical challenges when it comes to replacing area lights – from outage complaints and street closures to crew and budget limitations. With LifeTime EverSite, users experience faster outage response, fewer trucks rolls, dramatically reduced maintenance time and lower lifecycle costs.
